SKILLS

- HTML5, CSS3, JAVASCRIPT
- JQUERY
- NODEJS, EXPRESS
- MYSQL, MONGODB
- MVC

EDUCATION

University of WI - Extension

Coding Boot Camp

6-month, part time certificate program covering full-stack web development.

Maintained an A average while dedicating 40+ hours / week to coursework and additional learning.

ABOUT

A formerly dedicated high school history teacher who, with the help of a mandated PD seminar, found my true passion in tech and web development. I've since left the public education sector, enrolled in a coding boot camp, and have pursued this passion full time. Web development has become much more than a viable career option for me, and truly turned into something I seek to become an expert in. More and more I'm finding my free time occupied with new coding experiments and research into new languages, and I wouldn't have it any other way. Below you'll find some of the interesting projects I've been working on that showcase my skills.

EXPERIENCE

Command-Line Marketplace Application
(https://github.com/cclivick/bamazon)

Marketplace application with multiple command-line features for customers and managers.

Beer and Weather Pairing Application
(https://github.com/johnpgeipel/Awesome_Project)

Application uses a personally designed algorithm to find weather stats for a user's area from the OpenWeatherMap API and recommend beers of varying styles and potencies from BrewDog Brewing's API.

"Tinfoil" Metal News Web Scraping Application
(https://github.com/cclivick/tinfoil)

Scrapes recent headline news from Metal Injection's homepage and allows users to save articles and write digital notes on them for future reference. Uses Cheerio NPM package and MongoDB for saving articles and notes.
